A P  L L O

ENGINEERING PRECISION
IN EVERY DETAIL.
SERRATED FLANGE SCREW.

zoe screw
APOLLO

Emotion. Idea. Experience.

Every detail matters.

Every decision in prosthetic work carries consequences.

zoë screw was created for those who understand this.

Zoë - named in inspiration of life, energy, and precision.

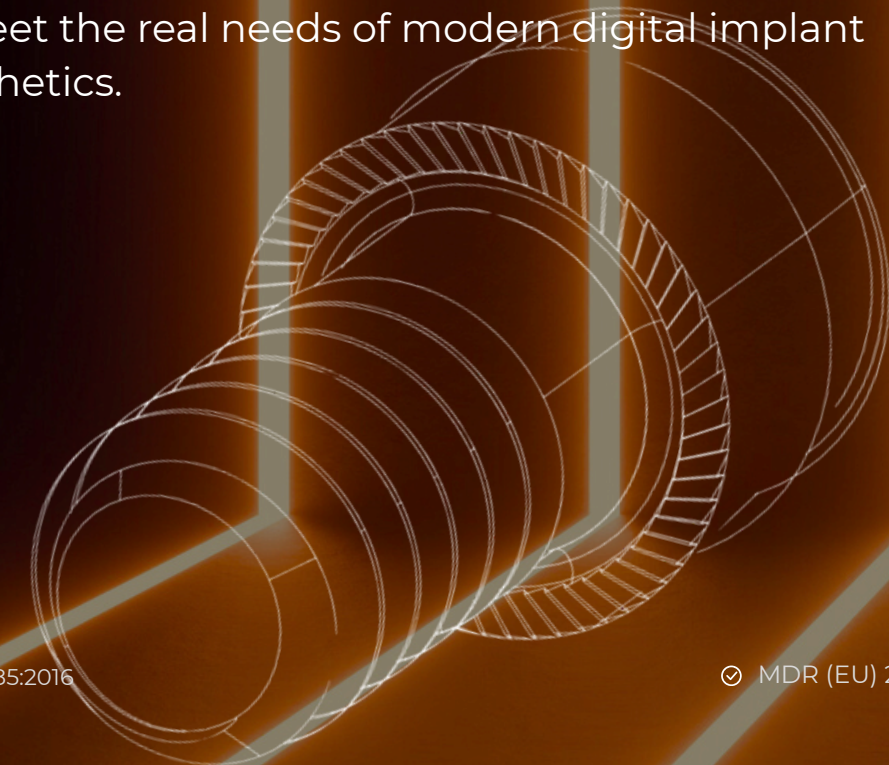

Designed with what matters most in mind:
stability, ergonomics, and uncompromising quality.

zoë screw // focused on every detail — achieving perfection.

zoë screw - serrated flange screw.

This is a precisely engineered prosthetic component, developed with stability of connection, repeatability of work and full control during assembly in mind. Every element of its geometry has been designed to meet the real needs of modern digital implant prosthetics.

Key Design Innovation

This solution is designed for specialists who demand consistent and predictable results.

Unique serrated flange design

- Enhances component seating control
- Reduces micro-movements - no screw loosening
- Supports the stability of the prosthetic connection

Optimized geometry

- Increased height at the connection with multiunit
- Larger screw head diameter improves force distribution during tightening
- Two versions depending on the material it will be used on.
- Two types: straight or multiSHIFT®
- Unified 1,25mm screwdriver
- Tightening torques are available on our website.

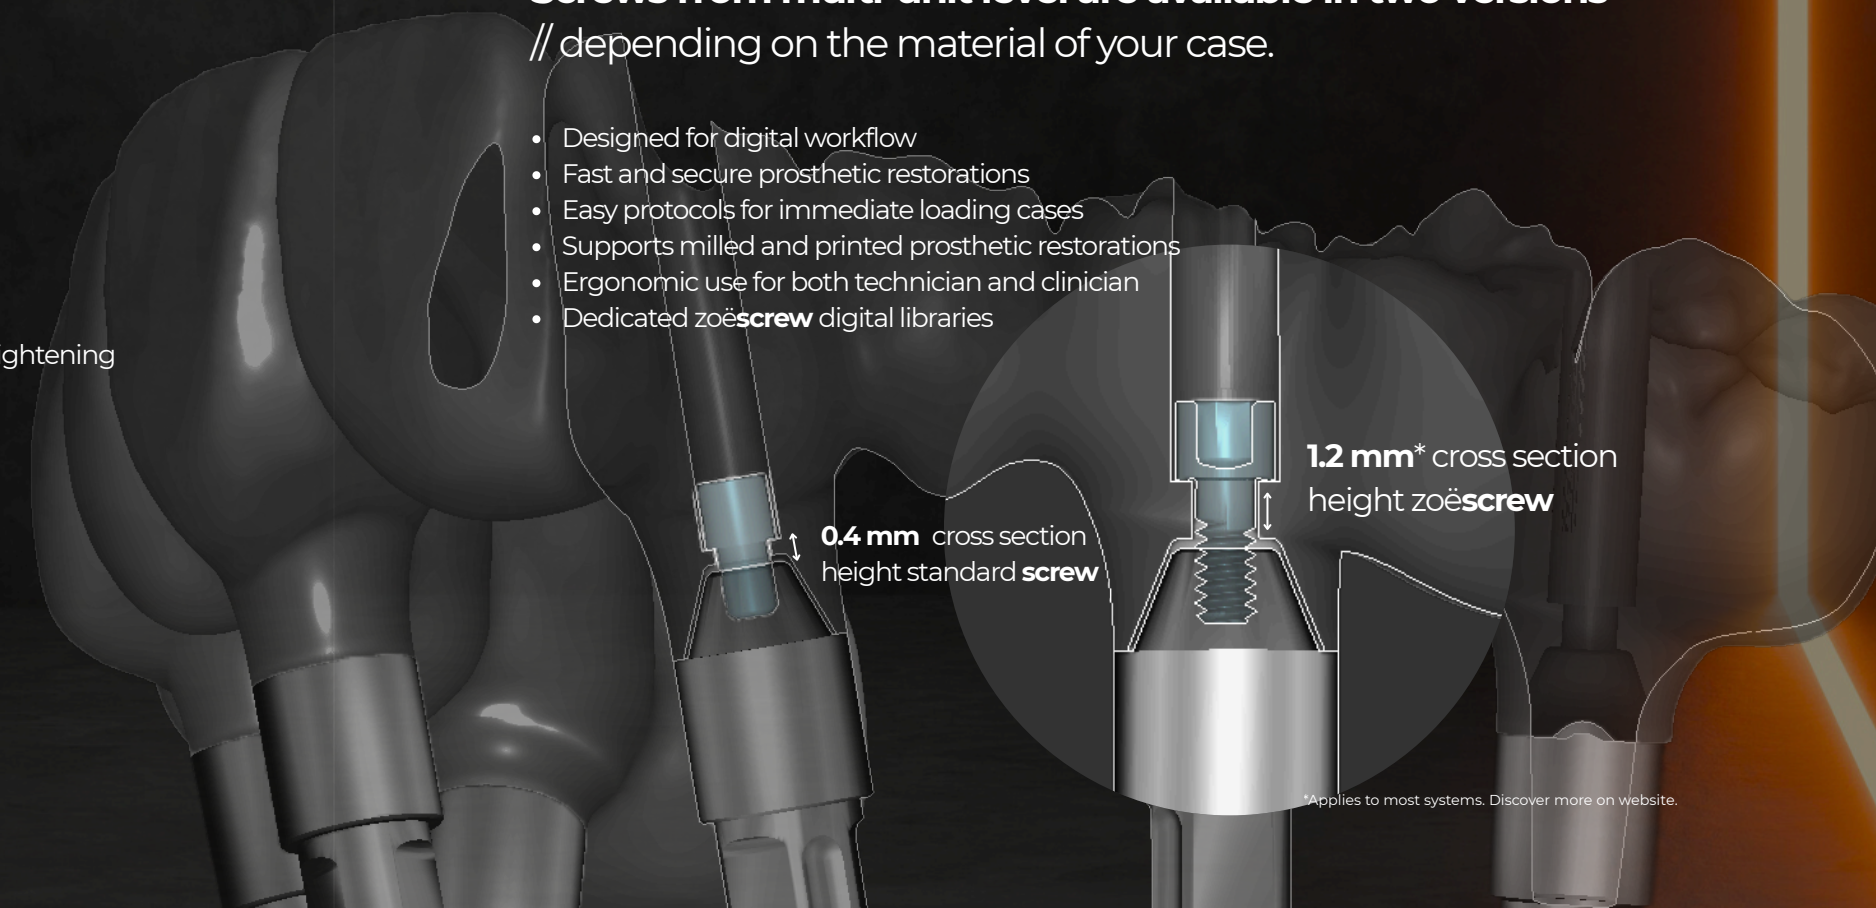

Quality & Clinical Benefits

zoë screw is a tool designed for stability, precision, and predictable outcomes. It meets the demands of work in environments with high clinical responsibility.

Screws from multi-unit level are available in two versions

// depending on the material of your case.

- Designed for digital workflow
- Fast and secure prosthetic restorations
- Easy protocols for immediate loading cases
- Supports milled and printed prosthetic restorations
- Ergonomic use for both technician and clinician
- Dedicated zoë screw digital libraries
